Scope and Coverage

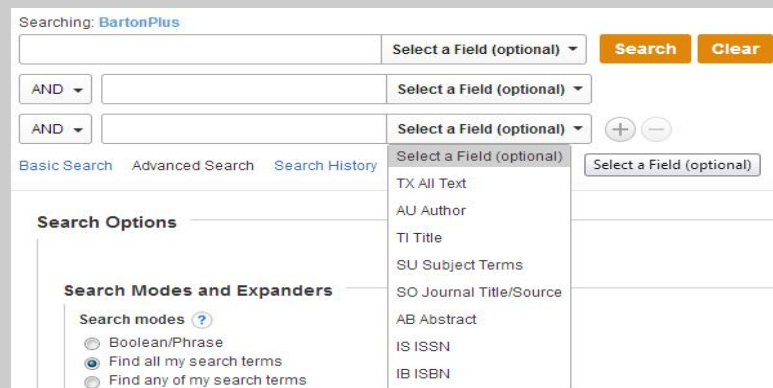

The MIT Libraries are now five divisional libraries: Hayden (Science and Humanities), Barker Engineering, **Lewis Music Library**, Dewey (social sciences and management), and Rotch (architecture and planning). All the libraries cover huge numbers of resources. The print and multimedia collections of the MIT Libraries include more than 5 million items, with over 3 million volumes of print material, 17,000 journal and other serial subscriptions, 478 online databases, over 55,000 electronic journal titles licensed for access, and over 2.8 million items in collections of microforms, maps, images, musical scores, sound recordings, and videotapes. In addition to the divisional libraries, there are a few smaller libraries that serve specialized fields: Lewis Music and Rotch Visual Collections. The Lewis Music Library houses the MIT Music Oral History Project. The Institute Archives and Special Collections contain materials documenting MIT's history, and the Library Storage Annex, located off-campus, houses materials that can be requested and available for use the next business day. The Libraries also manage DSpace, a digital repository created to capture, preserve, and share MIT's intellectual output with the world. DSpace at MIT currently houses over 21,000 MIT theses.

Kind of Information

In the MIT Libraries home page, there is following basic search catalog with options to choose one particular material type (from articles, e-books, e-journals, databases, books, courseware, and website) and bibliographic field (from key word, title, and author).

In advance search process, users can choose the bibliographic field from following options showing in the drop down menu. To get desired documents users may add the search queries as required by 'and', 'or', 'not' Boolean operators.

The search result can be refined by mentioning the following options:

Author

MIT Barton Catalog

The above search processes produce a list of documents where every title is hyperlinked with a web page with the detail bibliographic information, viz., title of the work, name of the author, language, publication information, publication date, physical description, series, publication type, document type, subject terms, notes, name of other author if required, ISBN, OCLC numbers, accession number, name of the database where the particular document is found.

Along with the above bibliographic information there is links to similar books, other books by this author, google book preview.

Special Features

➤ With catalog search process there are following additional search tools for:

- MIT's WorldCat;
- Vera: Databases & e-journals;
- MIT course reserves;
- HathiTrust Digital Library;
- Full-text finder;

➤ There are following tools users can use for particular desired document:

- Print
- E-mail
- Save
- Cite
- Export
- Permalink
- Share

➤ DSpace@MIT is a service of the MIT Libraries to provide MIT faculty,

researchers and their supporting communities stable, long-term storage for their digital research and teaching output and to maximize exposure of their content to a world audience. **DSpace@MIT content includes** conference papers, images, peer-reviewed scholarly articles, preprints, technical reports, theses, working papers, research datasets and more. This collection of more than 90,000 high-quality works is recognized as among the world's premier scholarly repositories and receives, on average, more than 1 million downloads per month.

Arrangement Pattern The search result produces a list of documents arranged by relevancy to the search queries. Users can rearrange the list by publication date (newest date to oldest date or vice versa).

Remarks According to the library website the mission of the MIT Libraries is to create and sustain an evolving information environment that advances learning, research, and innovation at MIT. We are committed to excellence in services, strategies, and systems that promote discovery, preserve knowledge, and improve worldwide scholarly communication.
