ElecDir - Electronics and Electrical Web Directory

Brief History

Subject to research

Scope and Coverage

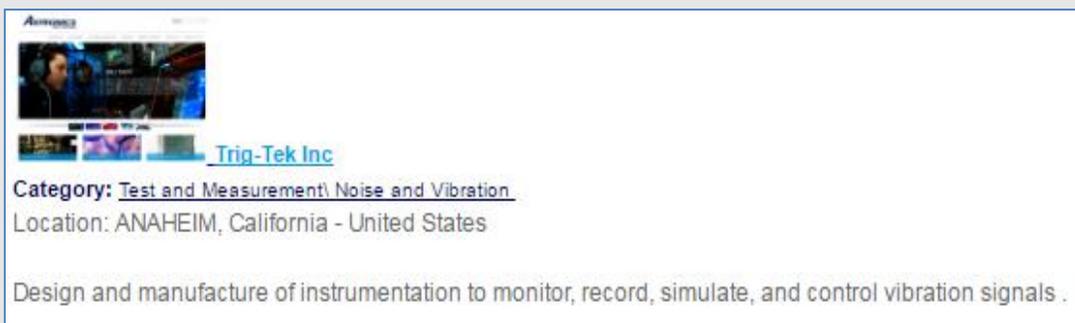

It provides the links of the websites which are related to electronics. Websites on different categories are given here. Some of those are: electromechanical, hardware, human interfaces, image processing, personal computer display, transformers and inductors, optoelectronics and fiber, production equipment and materials etc. Any visitor can search the required website country wise or continent wise.

Kind of Information

The directory contains information on a variety of categories. Total no. of websites under each category are given in brackets. Under each category, the subcategories are listed also including their total no. of websites. An example is given below:

Under each of those categories, lists of websites are given. Each website is given including its URL, screenshot of its home page, location, type or category and a short description. Such as an website of *noise and vibration* gives result like:

Press releases are displayed in the left side of this directory with the date and location. New press release and new site can be submitted by filling up the given form. Newest listings are kept separately.

Special Features

- Visitors can search this directory including the advance search facility.
- Hyperlinks of related sites can be seen while a particular website is opened and links of related press releases are available also.

Arrangement Pattern

The main categories and the sub –categories are arranged alphabetically as shown below:

Remarks

This is very relevant tool to know about different categories of electronics and the related websites of different countries. The press releases help the visitors to be updated on the current topics.
