## Scope and Coverage

**The Encyclopedia of Surgery** has been written by various experts in the field of surgery and has been written specifically for healthcare students and patients. The Encyclopedia covers 450 surgical procedures and topics such as laser surgery, hysterectomy, endoscopy, cryosurgery, anesthetics, biopsy, angioplasty, medications and postoperative care, and many related subjects.

### ***Kind of Information***

Each article in the Encyclopedia of Surgery consists of a standardized format which includes the definition, purpose, diagnosis, aftercare, risks, mortality rates, and alternatives. Like an article on heart transplantation includes definition in which it is said that ‘heart transplantation, also called cardiac transplantation, is the replacement of a patient's diseased or injured heart with a healthy donor heart’. The purpose heading in this article have said that why the transplantation is needed; other headings like demographics, description, diagnosis, aftercare, risks, etc. provides different important information like the necessary conditions of hearth transplantation, the transplant procedures, diagnosis process before transplantation, aftercare, intensive care after transplantation, all physical examinations which are needed, complications occur during and after transplantation, etc. The article includes following image:

At the end the article includes references from books and others. Like the above article others are also well informative in respective topics and provide valuable information in different point of views.

### ***Special Features***

- In this encyclopedia users are able to put comments in a particular article, can ask questions, or add new information about the topics.
- At the end of the article there is a link to next and previous topic's articles.

- The Wikipedia articles on the topics are also linked the article web pages.

***Arrangement Pattern***

The homepage contains alphabetic list of all articles.

***Remarks***

This encyclopedia is a valuable reference source on different kind of surgeries and will be useful for medical students as well as general people.
