INDIAN FLORA AND FAUNA

India boasts a wide variety of flora and fauna which are diversified in nature and which depend upon the geography of the region.

FAUNA
There are around 500 varieties of mammals, 2000 species of birds and 30,000 types of insects and a wide variety of fish, amphibians and reptiles are found in the country according to the latest census estimate. Popular mammals include the [Elephant](#), the famous white lions and some common lions, the [Royal Bengal Tiger](#), [Rhinos](#), Wild Bisons some varieties from the cat family, deer, monkeys, wild goats, etc. Elephants are found in the sparsely populated hill areas of Karnataka, Kerala and Odisha.

Lions are found in the rocky hills and forests of the Gir area of Gujarat, Tigers in the Sunderbans and the Brahmaputra valley. The famous Project Tiger is a scheme financed by the government of India to safeguard the tiger in its habitat in nine selected reserves.

ELEPHANTS ON THE MOVE IN MUDUMALAI SANCTUARY, TAMILNADU

Indian Fauna also include the [wild ass](#) of Rajasthan, Nilgiri [Langur](#), [Lion-tailed macaque](#), Nilgiri mongoose and Malabar civet of the southern hills and the spotted deer. [Leopards](#) are found in many forests, Wolves roam the open country. [Cheetahs](#) are found in the Deccan plateau.

A huge number of snake varieties, lizards and crocodiles account for the reptile count. Snakes include the deadly King cobras to the equally poisonous Kraits.

Scorpions and insects are aplenty in this country. Disease carrying mosquitoes and destructive locusts are to be found. Useful insects include the bees, silkworms and the Lac insect.

INDIAN WILD ASS [Navigation satellite XPINAV-1](#)

Introduction
Indian Wild Ass called with scientific name as Equus hemionus khur is a rare species of Indian Wildlife. Its kingdom is Animalia and Phylum being Chordata, belongs to Class Mammalia and the order Perissodactyla. In general it is classified with the Family name as Equidae.

Commonly it is also called with several other names as Indian Wild Ass, Khur, Ghorkhar, or Ghorkad.

Physical Features
Indian Wild Ass is quite similar to a horse-like structure. Its coat is sandy in color; it may also change from reddish gray to beige, and to pale chestnut. Mane is dark and also which goes from the back of the head till the neck area. Mane is dark and brown stripes moves with the back of the animal to the end of the tail. Indian Wild ass may attain a body length of upto 260 cm and its shoulder has a height of 120 cm range. It has a tail that is quite short, slender and can reach a length of around 80 cm. It is covered by a brownish and yellow mingled hair.

Indian Wild Ass has a body weight that is approximately 250 kg in usual. Mouth is slender in shape and ears are long and it is pointed. It is true that it belongs to one among the fastest animals in the World and it can attain the maximum speed of upto 50 km in an hour.

Distribution and Habitat
Indian Wild Asses are genetically adapted to the xerophytes which can be accommodated to the desert regions based on their habitat. Feeding is mostly done by these subspecies in the early morning hours and late in the evening. As they are drinkers, they are quite tolerant of the saline content in their food.
