

Home Page

The screenshot shows the top navigation bar with the Government of Canada logo and name in both English and French. A search bar is located on the right. Below the navigation bar is a menu with categories: Jobs, Immigration, Travel, Business, Benefits, Health, Taxes, and More services. The main content area features a 'Home' breadcrumb, a 'Open Government' heading, and a welcome message. To the right, there is a 'Blog: Open Data Inventory' section with a 'Pause' button and 'Item 2 of 4'. Below the main text, there are social media icons and a search box for the Open Government Portal. The 'Latest blogs' section lists three articles: 'Canada's ready for global leadership on open government', 'Proliteracy.ca - Our Journey Since CODE 2015', and 'Site improvements – nearly invisible, but worth noting'.

Government of Canada

Scope and Coverage

Through Canada's new Open Government portal one can explore how the Government of Canada is working with the national and international open government community to create greater transparency and accountability, increase citizen engagement, and drive innovation and economic opportunities through open data, open information, and open dialogue. There are 118,101 records present in open govt. portal till date. There are two portal types ...Open Data (117969) & Open Information (132). It covers all the government information of Canada.

Kind of Information

There has been a reduction in the number of open information records. These records are categorized under Open data, and open information.

Open Data: Users can search open data that is relevant to Canadians, learn how to work with datasets, and see what people have done with open data across the country.

Open information: The goal of Open information is to provide easy access to all of the Government of Canada's information. This provides Canadians with greater transparency of government programs, activities, publications and spending.

[Pipeline occurrence data from January 2004 to present](#)

The TSB is publishing selected fields from its Pipeline Occurrence Database System (PODS) so that this information can be used by industry and the public in order to advance transportation safety. The pipeline data file allows you to view accidents and incidents that have been reported to the TSB...

After selecting a particular title from the records users can get information about brief description about the title, publisher's name, license, resources, geographic information etc.

Pipeline occurrence data from January 2004 to present

The TSB is publishing selected fields from its Pipeline Occurrence Database System (PODS) so that this information can be used by industry and the public in order to advance transportation safety. The pipeline data file allows you to view accidents and incidents that have been reported to the TSB since 1 January 2004. The data provided in the pipeline data file is described in the accompanying data dictionary. TSB data is collected according to the mandatory occurrence reporting requirements described in the TSB Regulations. On 1 July 2014, the TSB issued new regulations that changed some reporting requirements. Data prior to this date were collected under the reporting requirements described in the TSB Regulations in effect at that time. This pipeline data file will normally be generated on the 15th of each month. Basic information about each new occurrence in the previous month is available by the date of publication. Further factual information is added when available. As this data is pulled from a live database that captures the results of ongoing investigations, historical data is subject to change, with the oldest data being the most stable. Further, as many occurrences are not investigated formally, information recorded on some occurrences may not have been verified. The scope of what is published will evolve as the TSB gains more experience in publishing this type of data.

Remarks

Open Government is about making government more accessible to everyone. This means giving greater access to government data and information to the Canadian public and the businesses community.
