Scope and Coverage

The UGRG Book Review Series publishes high quality reviews of recent books related to cities and geography. The series is segmented by yearly volumes, each containing up to 20 book reviews.

Kind of Information

The UGRG Book Review Series deals with logic of Urbanism, Construction, Urban Geography, Urban transformation, Urban Revolutions etc. Urban geographers are primarily concerned with the ways in which cities and towns are constructed, governed and experienced. Contrary to neighbouring disciplines such as urban anthropology, urban planning and urban sociology, urban geography mostly investigates the impact of urban processes on the earth's surface's social and physical structures. The UGRG Book committed to developing constructive dialogue between different analytical, theoretical and methodological traditions of urban geography and urban studies, and to increasing the profile of female and early career urban geographers. All these features are highlighted under the UGRG Book Reviews.

Urban Geography. A critical introduction. Andrew E. G. Jonas, Eugene McCann, Mary Thomas. 2015. Chichester: Wiley Blackwell. 384 pages. £68.50. ISBN: 978-1-4051-8979-8.	
Most critical geographers in charge of an introductory urban geography course know the dilemma only too well: should one use a textbook that is far from satisfactory, or rely on articles and book chapters that are most likely too advanced for the students. With the publication of the Critical Introduction to Urban Geography - 11 th in the growing series of much needed critical introductions to a number of geography sub-fields - this dilemma might be, if not solved, at least significantly reduced.	
The textbook, which approaches cities explicitly as "socio-spatial processes" (p. xvii) saturated	

Each review is presented with title, authors/editors name, publication details, review article and reviewer name etc. Each review can be downloaded in PDF format.
